Rule 45, Federal Rules of Civil Procedure, Parts C & D:

(c) PROTECTION OF PERSONS SUBJECT TO SUBPOENAS

(1) A party or an attorney responsible for the issuance and service of a subpoena shall take reasonable steps to avoid imposing undue burden or expense on a person subject to that subpoena. The court on behalf of which the subpoena was issued shall enforce this duty and impose upon the party or attorney in breach of this duty an appropriate sanction, which may include, but not limited to, lost earnings and a reasonable attorney's fee.

(2)(A) A person commanded to produce and permit inspection and copying of designated books, papers, documents or tangible things, or inspection of premises need not appear in person at the place of production or inspection unless commanded to appear for deposition, hearing or trial.

(B) Subject to paragraph (d)(2) of this rule, person commanded to produce and permit inspection and copying may, within 14 days after service of the subpoena or before the time specified for compliance if such time is less than 14 days after service, serve upon the party or attorney designated in the subpoena written objection to inspection or copying of any or all of the designated materials or of the premises. If objection is made, the party serving the subpoena shall not be entitled to inspect and copy the materials or inspect the premises except pursuant to an order of the court by which the subpoena was issued. If objection has been made, the party serving the subpoena may, upon notice to the person commanded to produce, move at any time for an order to compel the production. Such an order to compel production shall protect any person who is not a party or an officer of a party from significant expense resulting from the inspection and copying commanded.

(3)(A) On timely motion, the court by which a subpoena was issued shall quash or modify the subpoena if it

(i) fails to allow reasonable time for compliance;
(ii) requires a person who is not a party or an officer of a party to travel to a place more than 100 miles from the place where that person resides, is employed or regularly transacts business in person,

except that, subject to the provisions of clause (c)(3)(B)(iii) of this rule, such a person may in order to attend trial be commanded to travel from any such place within the state in which the trial is held, or

(iii) requires disclosure of privileged or other protected matter and no exception or waiver applies, or
(iv) subjects a person to undue burden.

(B) If a subpoena

(i) requires disclosure of a trade secret or other confidential research, development, or commercial information, or

(ii) requires disclosure of an unretained expert's opinion or information not describing specific events or occurrences in dispute and resulting from the expert's study made not at the request of any party, or

(iii) requires a person who is not a party or an officer of a party to incur substantial expense to travel more than 100 miles to attend trial, the court may, to protect a person subject to or affected by the subpoena, quash or modify the subpoena or, if the party in whose behalf the subpoena is issued shows a substantial need for the testimony or material that cannot be otherwise met without undue hardship and assure that the person to whom the subpoena is addressed will be reasonably compensated, the court may order appearance or production only upon specified conditions.

(d) DUTIES IN RESPONDING TO SUBPOENA.

(1) A person responding to a subpoena to produce documents shall produce them as they are kept in the usual course of business or shall organize and label them to correspond with the categories in the demand.

(2) When information subject to a subpoena is withheld on a claim that it is privileged or subject to protection as trial preparation materials, the claim shall be made expressly and shall be supported by a description of the nature of the documents, communications, or things not produced that is sufficient to enable the demanding party to contest the claim.

1. About Coinfirm

Coinfirm is the world leader in blockchain analytics and regulatory technology ('RegTech') solutions, creating the foundation for the safe mass adoption of blockchain and cryptocurrencies. Coinfirm specializes in blockchain AML (Anti-Money Laundering) and crypto fraud investigations.

Our solution is based on the actual knowledge of crime, rule-based algorithms and crypto asset tracking technology that takes the security of blockchain and crypto financial markets to a level never seen in traditional finance. Fundamentally, it is based on three interoperable pillars:

- I. Anti-Money Laundering (Effective Prevention) – technology platform allowing institutions to verify the risk of blockchain transaction counterparties and meet regulatory requirements by using the most comprehensive AML model and world's largest blockchain attributes database.
- II. Fraud Investigations and Crime Fighting (Immediate Reaction) – world's most advanced real-time asset tracking technology, utilizing multiple tracing methods, enabling freezing funds in flight, and providing court-admissible evidence for successful litigation and asset recovery.
- III. Data Ecosystem – the network and infrastructure of data collection and data reporting, supporting 20+ blockchains. Additional incentives to report suspicious activities and allowing victims of crypto fraud from all around the world to report and claim lost funds.

Coinfirm places the most precise demarcation line between "good" and "bad" in the crypto world. The oracle of future compliance exists today.

Visit www.coinfirm.com for more details about our products and services.

2. Scope of Work

2.1 Client

This analysis was commissioned to Coinfirm by:

Name: The Law Offices of G. Martin Meyers, P.C.

Address: 35 W Main Street, Suite 106, Denville, New Jersey 07834, United States of America

further referred to as 'Client'.

2.2 Scope of Work

Before commencing the work, Coinfirm was provided by the Client with the following transactions on the Bitcoin blockchain ("*Evaluated Transactions*"). Coinfirm was requested to identify the destination of the funds of the *Evaluated Transactions*.

#	Blockchain	Transaction Hash	Destination Address	Amount (in BTC)
1	Bitcoin	74fa0f5bf7e7c9cdead598fa82c898a835031503e4bf00ea7980c06182ba3a3b	bc1qdhxrng6sm03wg119g4n8rhecz9f3ppqv72qv4g	9.91488179
2	Bitcoin	593c659dbeaba2c9f46ae7d73861f25e99b9f82f9339cf8a8805a42e8612b114	bc1qdhxrng6sm03wg119g4n8rhecz9f3ppqv72qv4g	0.03202259
TOTAL				9.94690438

Table 1 - Evaluated Transactions

2.3 About this Report

This report was prepared by one of our forensic investigators using the latest blockchain analysis technology. All of our reports are reviewed by another experienced investigator to ensure accuracy and our high standards. The report covers transactions made through 2023-10-20. All dates are in UTC time zone.

3. Findings

3.1 Assets Traced

Coinfirm has applied five different tracing methodologies -- “First In First Out”, “Last In First Out”, “Pro Rata Distribution by Blocks”, “Pro Rata Distribution by All Outputs”, and “Taint Last”. For the full tracking results, please refer to Appendix 1. All assumptions and statements in this report are based on transactions and destinations confirmed by all tracing methods.

In total we were able to identify 8.7986 Bitcoin out of 9.94690438 Bitcoin in scope. 7.77243 Bitcoin out of 9.94690438 Bitcoin could have been confirmed by all tracing methods. When the destinations are confirmed by all tracing methods, there can be a high level of confidence in the results. See Section 4 for more details on our tracing methodology.

The movement of funds has been obfuscated using relay chains, where funds are transferred multiple times and split among many destinations. This results in a large amount of transaction fees being paid and explains the difference between the amount of Bitcoin we were able to trace and the funds in scope.

3.1.1 Assets Traced Identified on Cryptocurrency Services

The Destination of Funds Tracking shows that approximately 7.12226 Bitcoin of the *Evaluated Transactions* were received by -14- identified cryptocurrency services. 6.79192 Bitcoin (“*Assets Traced*”) out of 7.12226 Bitcoin have been confirmed by all five tracing methodologies. When the destinations are confirmed by all tracing methods, there can be a high level of confidence in the results. Please refer to Section 4 for more details on our tracing methodology. For the full tracking results, refer to Appendix 1. The table below displays the information about the cryptocurrency services that received the funds at the time this report was issued:

#	Owner Name	Total Assets Traced (in USD)	Total Assets Traced (in BTC)	Assets Traced (confirmed by all methods, in USD)	Assets Traced (confirmed by all methods, in BTC)

TOTAL:		212,258.66	7.12226	199,411.85	6.79192

Table 2 - Assets Identified on Cryptocurrency Services (USD amounts at day of transaction)

The following chart shows the distribution of *Assets Traced* identified of Cryptocurrency Services. The table below provides transaction details for the addresses identified as recipients of the assets traced. In total, more than 95% of the funds were transferred to -4- different services:

Figure 1 - Distribution of Assets Traced identified on Cryptocurrency Services

Using a so-called relay chain pattern, the perpetrators attempted to obfuscate the transaction path and increase the complexity of tracking. With each payment, a small portion of the amount is sent to a different address. This pattern is then repeated many times.

If the data has to be analyzed manually, it represents a correspondingly high and error-prone effort for the investigator. We have automatically tracked these transactions with the "Coinfirm Investigator" and were able to determine the destination addresses.

The following is a visualization of the transaction path of *Assets Traced* to Binance:

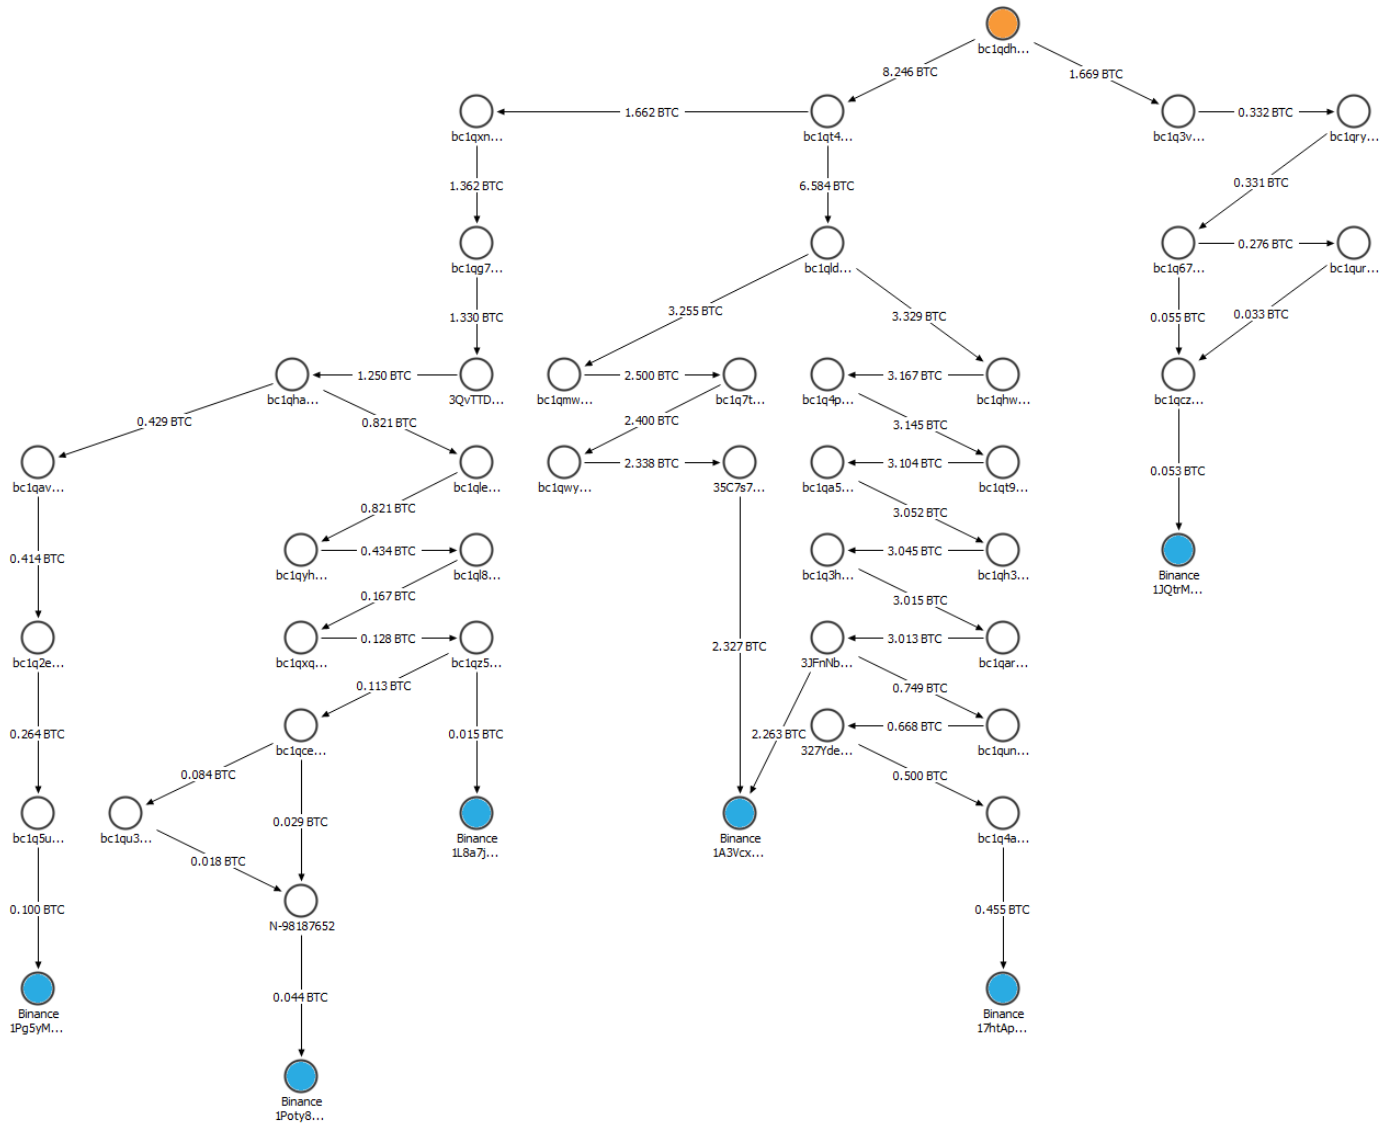

Figure 2 - Assets Traced identified on Binance

The table below presents transaction details for the addresses identified as recipients of the *Assets Traced*.

Table 3 - Deposit transactions for Assets Traced identified on Cryptocurrency Services

3.2 Assets Traced Identified at Addresses with No Identified Owner

The Destination of Funds Tracking shows that approximately 1.67634 Bitcoin of the *Evaluated Transactions* were received by -26- addresses with no identified owner. 0.98051 Bitcoin ("*Assets Traced*") out of 1.67634 Bitcoin have been confirmed by all five tracing methodologies. When the destinations are confirmed by all tracing methods, there can be a high level of confidence in the results. Please refer to Section 4 for more details on our tracing methodology. For the full tracking results, refer to Appendix 1. The table below displays the information about the addresses with no identified owner that received the funds at the time this report was issued:

#	Destination Address	Total Assets Traced (in USD)	Total Assets Traced (in BTC)	Assets Traced (confirmed by all methods, in USD)	Assets Traced (confirmed by all methods, in BTC)

Table 4 - Assets Identified at Addresses with No Identified Owner (USD amounts at day of transaction)

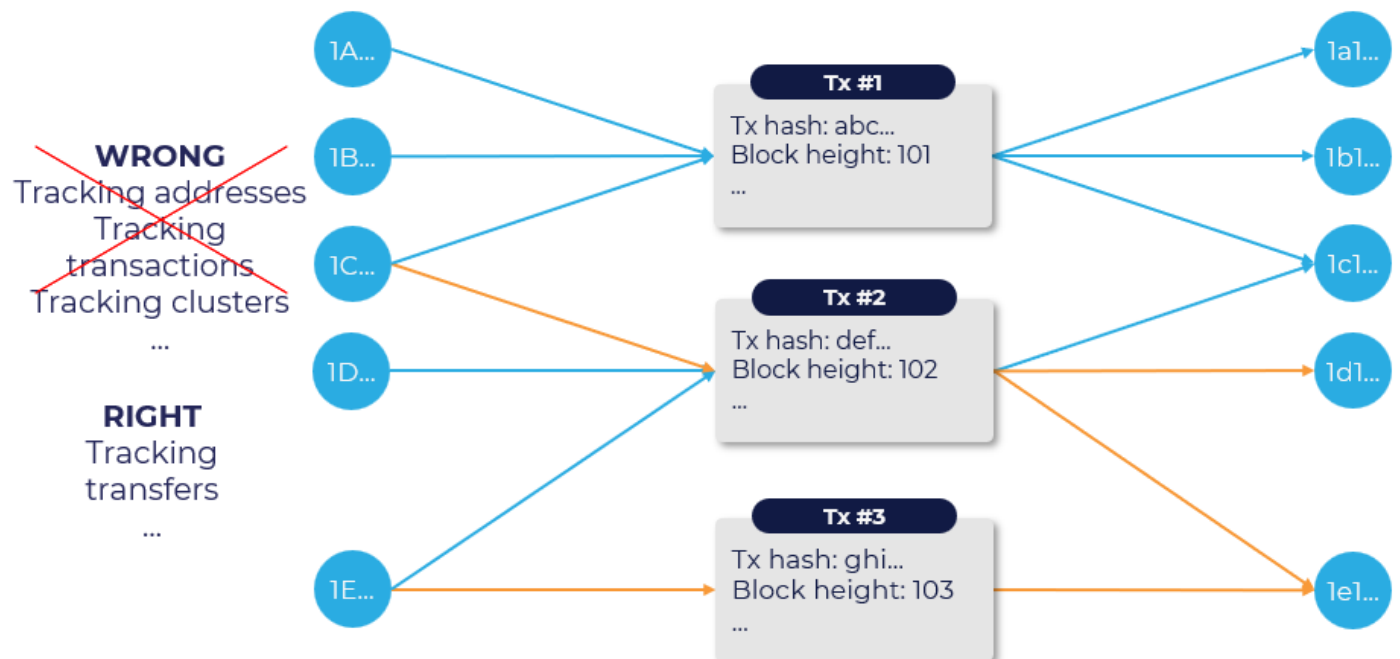

4. Methodology

4.1 What is crypto asset tracking

Crypto asset tracking means identification and evidencing the destination or source of crypto assets through the application of forensic accounting methods. Defrauded cryptocurrency funds are typically passed through complex layering/mixing schemes aimed at concealing the trail of funds.

Each asset tracking exercise starts with the provision of transfers to be traced. Unlike in traditional finance, blockchain transactions may contain several transfers of funds occurring in one transaction, where only part of them should be subject to tracing. Therefore, tracking should always be executed on the lowest level of granularity which is a transfer and not a transaction, address, or cluster.

Many blockchain analytics treat all consecutive transactions as dirty or tainted funds using 'click-through graph tools' (the so-called 'Poison' method). Poison method is not considered a forensic accounting method by many witness experts as it does not follow the rules of professional accounting and neglects the chronology of transactions. It does not distinguish between illicit and clean funds.

4.2 Layering/mixing schemes

One of the methods aiming to conceal the trail of funds is usage of blockchain transactions mixers (also referred to as ‘tumblers’/‘anonymizers’), which are services that attempt to confuse the trail of blockchain transactions. In most cases funds are divided into smaller portions and are subsequently mixed at random with similarly sized portions of a number or ‘pool’ of other users’ funds. As a result, the perpetrator receives their funds back with a significantly lower ‘taint’ ratio (low traceability to the perpetrator’s initial blockchain addresses). Some blockchain protocols like Dash or Zcash have embedded anonymizing functions and are widely referred to as ‘privacy coins’ in the blockchain industry. According to existing regulations (e.g., 5th AML Directive of the EU) running a mixing service may be illegal, and the targeted enforcement of these regulations has led some VASPs to delist some privacy coins.

Mixing services are of most benefit to malicious actors if the amount of illicit funds is not extraordinarily large. The higher the amount, the more difficult it is to conceal the source of funds. Therefore, large operations tend to pass funds through a deliberately designed chain of hundreds or thousands of layering transactions.

The destination of illicit funds are typically VASPs, often those with no or low KYC standards as well as reputable ones, as most of them are still missing truly effective, high-tech AML and Transaction Monitoring solutions like Coinfirm’s AML Platform. The other type of usual recipients of defrauded coins are various Clearnet and Deep Web blockchain services, such as marketplaces, decentralized finance applications or gaming and gambling sites. All these endpoints may serve criminals both to cash out illicit cryptocurrencies as well as a means of further hindering the trail of funds by exchanging them through several such services.

4.2.1 Relay or Peel Chains

A “relay or peel chain” occurs when a certain amount of coins/tokens is sent from one address through a series of transactions in which a slightly smaller amount of coins/tokens is transferred to a new address each time. In each transaction, some quantity of coins/tokens “peel off” the chain to another address. This is repeated multiple times.

4.3 Coinfirm tracking algorithm

Coinfirm algorithm can trace crypto assets through the mixing transactions (e.g., CoinJoin) and provide the full evidence of the perpetrator activity. However, there are services that, without having the access to the internal servers, make it impossible to trace the specific individuals who used them. Examples of such services are ChipMixer and Tornado Cash. Both are designed in a way that the full crypto flow path of the specific individual is not visible on the blockchain and the assets withdrawal from the mixer can often appear on the address completely unrelated to the input address. Coinfirm can further trace coins mixed through such services and presented their Destination, however, the 'current' owner of such coins may no longer be the 'initial' perpetrator, but an individual who also deposited coins into the same mixing (anonymization) service. In such case, we provide evidence of the coins being "the same defrauded property" - what it means is that other users, of the same mixing service that was used by the 'initial' perpetrator, received coins originating from the fraudulent activity (mixer transferred coins from 'initial' perpetrator to the wallet of another mixer user).

Whether traced funds are received by a VASP-controlled wallet or not has an impact on our tracing analysis. Tracing of the Claimant's cryptocurrency will continue until either those funds are received by a VASP-controlled wallet, or the funds are received by a wallet that still currently holds those funds (i.e. there has been no further onward dissipation of the funds).

Most VASPs operate pooling addresses used to store customer deposits and to execute transfers. When a user of the VASP wishes to transfer cryptocurrency from their exchange account, often the exchange will use cryptocurrency held in one of its pooling addresses to settle the transaction, rather than transfer cryptocurrency held in a wallet that only includes that specific user's cryptocurrency. In these cases, the records matching user account transactions to the movements on the blockchain showing which addresses have been used to settle the transaction are kept only by the exchange. These internal records are not publicly available. The tracing of the Claimant's cryptocurrency must, therefore, stop once those funds are received by a wallet controlled by an exchange as we do not know which user account transactions relate to transfers from these wallets.
